Abstract
　　An electronic engineering manager may well face a documentation problem that rivals the design job itself. The massive problems associated with producing documentation in a timely manner prompted the emergence of a new class of tools called electronic technical publishing (ETP). ETP includes many desktop publishing capabilities but goes far beyond the process of generating printable **pages.** Mentor Graphic's Context Division offers a set of ETP tools-Context Writer, Context **Editor** and Context Documentor-that support a procedure called inclusion by reference. The writer of the manual can include **schematic** by simply telling the ETP system the **schematic's** location thus the documentation automatically includes any changes made by the engineer. In the Context system, security procedures can be invoked that let reviewers check a document in a read-only mode, but with the ability to add annotations or comments to the document without changing the document's text. To help manage the documentation effort, ETP tools help with structure maintenance, change control, and file security and access control. Access rights may change as a document progresses through its life cycle. (0 refs).
Descriptors

desktop-publishing; electronic-publishing; system-documentation;
technical-presentation; user-manuals.
Keywords
electronic engineering manager; electronic technical publishing; Context Writer; Context **Editor;**
Context Documentor; inclusion by reference; structure maintenance; change control; file security;
access control.
Classification codes

C7230   (Publishing and reproduction).
C7108   (Desktop publishing).
C7410D   (Electronic engineering).
